Transition Plans

Transition Plans: Rising to the Forefront of Sustainability Strategies

Sets the EU on the path to **green transition** with the ultimate goal to reach climate neutrality by 2050.

Transition Plans

Transition Plans are seen as a core instrument for successfully shaping the transformation. The disclosure of transition plans provides investors and the public with the necessary information to finance the green transition at pace and scale required.

What is a transition plan?

A transition plan is a strategic roadmap that lays out an entity's targets and actions for its transition towards a low-carbon, sustainable economy and to contribute to limiting global warming to 1.5 °C. A transition plan shows how sustainability targets can be achieved in the short, medium and long term.

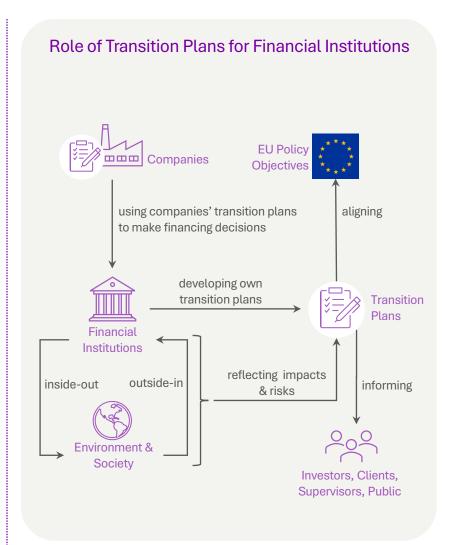

In addition to an entity's impact on the environment (inside-out), such a plan can also include the assessment of risks for the entity that are associated with climate change and environmental degradation (outside-in) and how the entity intends to prepare for managing such risks.

What is the purpose?

The purpose of transition plans is to support a smooth, orderly, and transparent shift to a more resilient and sustainable future, including:

- **Guiding the transition** by outlining specific steps and timelines for achieving sustainability targets
- Managing and mitigating risks resulting from e.g. climate change, regulatory developments, or economic shifts
- Ensuring accountability and tracking progress against measurable targets and deadlines
- **Equipping investors** with information they need to make informed decisions about financing
- **Ensuring compliance** with EU policy objectives and regulatory obligations

Heightened Regulatory Expectations Put Transition Plans in the Spotlight

Key examples of regulatory requirements and initiatives around transition plans:

Corporate Sustainability Reporting Directive (CSRD), Art. 19; European Sustainability Reporting Standards (ESRS) E1

Corporate Sustainability Due Diligence Directive (CSDDD), Art. 15

Capital Requirements Directive (CRD), Art. 76 and Art. 87a

Capital Requirements Regulation (CRR), Art. 449a

European Banking Authority (EBA) Guidelines on Management of ESG Risks

Network for Greening the Financial System (NGFS)

Task Force on Climate-related Financial Disclosures (TCFD)

UK Transition Plan Taskforce (TPT) Disclosure Framework

Requirement / Guidance

ESRS E1 Climate Change requires companies in scope of the CSRD to disclose transition plans for climate change mitigation, including greenhouse gas (GHG) emission reduction targets and climate change mitigation actions.

Art. 15 of the CSDDD focuses on climate change mitigation and requires large companies to adopt and implement a transition plan that addresses how the companies' business model and strategy will align with the goal of limiting global warming to 1.5 °C, in line with the Paris Agreement.

Art. 76 requires the management bodies of credit institutions to develop and monitor the implementation of transition plans, including quantifiable targets and processes for addressing financial risks stemming from ESG factors in the short, medium, and long term. Art. 87a allows competent authorities to assess the alignment of banks with relevant EU policy objectives or general transition, and mandates EBA to develop guidelines for the management of ESG risks.

Art. 449a requires credit institutions to disclose their transition plans to align their activities with the Paris Agreement and other relevant EU climate objectives, including concrete steps and targets for reducing their exposure to carbonintensive activities and sectors and specific climate-related goals.

The EBA guidelines require institutions to develop robust transition plans with quantifiable climate goals and manage transition risk through scenario analysis and stress testing. Transition plans must be part of the overall business strategy and aligned with EU policy objectives.

In April 2024, the NGFS published a package of reports relating to transition plans, exploring the role of transition plans in the financial system and emphasising key areas, including setting robust GHG reduction targets, ensuring strong governance with clear board-level accountability and integrating financial planning with GHG reduction goals.

In November 2021, the TCFD published its Guidance on Metrics, Targets, and Transition Plans, providing detailed recommendations for organizations on how to structure and disclose their transition plans.

The TPT was announced at UN Climate Change Conference in Glasgow (COP26) and launched in April 2022 to develop the gold standard for private sector climate transition plans. The TPT framework is structured to help companies align their climate strategies with broader net-zero objectives, while also offering guidance on implementation and monitoring of progress. This framework is expected to become the foundation for mandatory transition plan disclosures in the UK by 2025.

From Ambition to Action: Exploring the TPT Gold Standard

UK Transition Plan Taskforce (TPT) was launched to develop a gold standard for best practice climate transition plans and developed a disclosure framework that helps organisations set out a credible and robust climate transition plan.

The following diagram outlines the key elements of the TPT framework:

Principles	Ambition	Action		Accountability	
Disclosure Elements	1. Foundations	2. Implementation Strategy	3. Engagement Strategy	4. Metrics & Targets	5. Governance
+ Disclosure Sub-Elements	1.1 Strategic Ambition	2.1 Business operations	3.1 Engagement with value chain	4.1 Governance, engagement, business and operational metrics and targets	5.1 Board oversight and reporting
	1.2 Business model and value chain	2.2 Products and services	3.2 Engagement with industry	4.2 Financial metrics and targets	5.2 Management roles, responsibility and accountability
	1.3 Key assumptions and external factors	2.3 Policies and conditions	3.3 Engagement with government, public sector, communities and civil society	4.3 GHG metrics and targets	5.3 Culture
		2.4 Financial planning		4.4 Carbon credits	5.4 Incentives and remuneration
					5.5 Skills, competencies and training

Your Experts

At ADVANTA, we combine profound specialist and industry knowledge in sustainability and ESG. This enables us to provide our clients with sound support in developing transition plans in line with regulatory requirements.
